Professional Summary

MERN Stack Developer with 3+ years of professional experience building production-grade SaaS applications, specializing in React.js and Next.js on the frontend with hands-on, end-to-end experience extending into Node.js, Express.js, and MongoDB. Delivered complex, data-heavy dashboards for real-time marina operations, AI-driven marketing tools, and a full-stack secure file-sharing platform built using the complete MERN stack. Strong track record of designing REST APIs, implementing authentication and session management, optimizing rendering performance, and shipping pixel-accurate UIs in cross-functional teams. Looking to bring full-stack MERN expertise, component architecture skills, and a shipping mindset to a high-impact remote product team.

Technical Skills

Frontend	React.js, Next.js, JavaScript (ES6+), TypeScript, Vanilla JavaScript, HTML5, CSS3
Backend	Node.js, Express.js, RESTful API Design, JWT Authentication, Session Management
Database	MongoDB, Mongoose
UI & Styling	Tailwind CSS, Material UI, Ant Design, Bootstrap, Responsive Design, Figma
AI & Emerging	OpenAI API Integration, Prompt Engineering, AI-driven Content Tools
Tools	Git, GitHub, Postman, VS Code, Chrome DevTools, Linux, CI/CD (GitHub Actions), WebSocket
Core Concepts	Full-Stack Development (MERN), REST API Integration, Performance Optimization

Work Experience

PySquad Informatics — Ahmedabad, Gujarat *Sep 2023 – Present*
Frontend Developer

- Engineered and maintained 3 production SaaS platforms (React.js, Next.js, Tailwind CSS, Ant Design), standardizing a shared component library that reduced cross-device UI defects across all product modules.
- Integrated 10+ REST APIs end-to-end auth flows, real-time data polling, and paginated list rendering directly improving application responsiveness and reducing perceived load time.
- Extended select modules with Node.js and Express.js REST endpoints and MongoDB for data persistence, building hands-on full-stack (MERN) proficiency alongside core frontend responsibilities.
- Eliminated rendering bottlenecks on real-time operational dashboards by replacing naive re-renders with React memoization (`useMemo/useCallback`) and windowed list virtualization, achieving smooth performance under high-volume concurrent data.
- Defined and evangelized component reusability standards adopted team-wide, reducing duplicated UI logic and accelerating feature delivery across new modules.

Tops Technologies — Ahmedabad, Gujarat *Jan 2023 – Jun 2023*
Frontend Developer Intern

- Built and deployed multiple responsive web pages and mini-projects using HTML5, CSS3, JavaScript (ES6+), and React.js, meeting client-facing quality standards.
- Integrated frontend interfaces with REST APIs across several projects, strengthening practical understanding of frontend-backend communication patterns.
- Accelerated debugging cycles by systematically leveraging Chrome DevTools, resolving UI rendering and JavaScript logic defects with measurable reduction in QA turnaround time.

Projects

ShareLyze — Secure File-Sharing Platform (MERN Stack) *React.js, Node.js, Express.js, MongoDB, JWT, REST APIs*

- Designed and developed a full-stack secure file-sharing platform end-to-end using the complete MERN stack, supporting images and PDFs with full user authentication (registration, login, JWT-based session management) and role-based access controls.
- Built RESTful APIs with Node.js and Express.js and modeled application data in MongoDB using Mongoose to support user accounts, file metadata, and permission rules.
- Built a real-time activity tracking dashboard capturing view counts, user interactions, and IP-level access events designed for both analytics visibility and security monitoring.

Marinapy — Marina Management SaaS Platform *React.js, Next.js, Ant Design, Tailwind CSS, REST APIs*

- Architected a cloud-native marina management platform covering berth allocation, CRM, billing workflows, and multi-timezone client communication for marina operators across global markets.
- Built interactive SVG-overlay map dashboards enabling real-time occupancy visualization and asset monitoring, layering dynamic data feeds on top of map APIs.

- Owned frontend performance for high-volume data views: introduced pagination, lazy loading, and memoization strategies to keep dashboards responsive under production-scale data loads.

Texture — AI-Powered Digital Marketing SaaS *React.js, REST APIs, Django Templates, AI Integration*

- Contributed to a SaaS platform combining REST API integration and Django templates to deliver AI-powered text analysis and advertising enhancement tools for marketing teams.
- Built dynamic UI components enabling marketers to seamlessly trigger AI-driven, API-powered workflows for automated ad optimization and content analysis with minimal manual intervention.
- Designed a mobile-responsive, user-friendly interface that helps marketing teams extract actionable insights from AI-generated recommendations with minimal friction.

Education

Smt. B.K. Mehta (IT Centre) BCA College — Palanpur, Gujarat *Aug 2018 – Apr 2022*
Bachelor of Computer Applications (BCA)

Certifications

- Full-Stack Web Development with MERN — Udemy / freeCodeCamp
- Responsive Web Design — freeCodeCamp
- Frontend Development with React.js — Tops Technologies (2023)

Achievements

- Shipped 3 live SaaS platforms serving global users across marina operations, digital marketing, and secure file management verticalsall within a 2-year tenure.
- Built and deployed ShareLyze as a solo full-stack MERN project implementing REST APIs, JWT auth, MongoDB data modeling, and a React.js frontend end-to-end.
- Proactively resolved critical rendering performance issues on real-time dashboards, unblocking a production deployment and improving end-user experience under peak data loads.
- Established team-wide component standards that accelerated new module delivery and measurably reduced duplicate UI code across the engineering team.
